Imputed income is the cost of single coverage less any additional amount that the member has to pay after picking up a civil union /domestic partner
So for the 1.5% members the imputed income is the cost of single coverage as the member pays 1.5% of his/her salary no matter what coverage level
For the 5% of premium sharing member the difference between what the member was paying for single and what he now pays for member/ spouse is subtracted from the single coverage
For a domestic/civil union member going to family we assume the member had parent child coverage
